Summary:

- Mendix Developer with hands-on experience building enterprise-scale low-code applications integrated with Agentic AI systems. Expertise in domain modeling, microflows, nanoflows, REST API orchestration, and secure SSO-based architectures. Proven ability to design scalable data models, implement role-based access control, and develop robust integration layers connecting Mendix with FastAPI services, JIRA, and other enterprise platforms. Strong background in environment deployments, performance monitoring using Grafana, and building production-ready applications aligned with modern UI/UX standards.

Education

- Bachelor of Technology (B. Tech),Computer Science & Engineering (AI & ML) Sai Spurthi Institute of Technology, Telangana, 2020 – 2024 | CGPA: 7.0

Certifications

- Mendix Rapid Developer
- AWS Cloud Quest: Cloud Practitioner

Technical Skills:

Category	Skills
Mendix Development	Microflows, Nanoflows, Domain Modeling, Entities & Associations, UI/Page Design, Validation Rules, Data Grids, List Views
Integrations & APIs	REST APIs, JSON Mapping, Import/Export Mapping, FastAPI Integration, API Orchestration
Frontend & UI/UX	Responsive Design, Figma-based UI Implementation, Conditional Visibility
Data & Storage	Mendix Database Management, Entity Modeling, Data Handling & Retrieval
Authentication & Security	SSO Configuration, Role-Based Access Control (RBAC), Secure API Integration
Monitoring & DevOps	Grafana Dashboard Monitoring, Application Logging, Debugging, Environment Deployments
Tools & Platforms	Mendix Studio Pro, Postman, Git, VS Code

Professional Experience

GSK / TCS, Bangalore, India **Nov 2024 – now**

Mendix Developer

- Designed and developed enterprise-grade Mendix applications with UI/UX aligned to Figma, ensuring consistent and user-centric experiences.
- Implemented SSO-based authentication and role-based access control, enabling secure and seamless enterprise access.
- Built a dynamic application onboarding system with automated unique ID generation for centralized context management.
- Integrated Mendix with FastAPI-based Agentic AI services, enabling real-time communication with multi-agent systems.
- Developed context-driven parameter orchestration, passing application-specific data to AI agents for intelligent, automated workflows (JIRA, AHA integrations).
- Designed scalable domain models and microflow-based API orchestration, handling data processing, transformations, and error management.
- Enabled stateful AI interactions using persisted metadata, allowing agents to autonomously retrieve context and perform actions.

- Managed Environment deployments and monitored system performance using Grafana, ensuring stability and observability.
- Collaborated with AI teams to deliver a low code + GenAI integrated platform, improving efficiency and reducing manual effort.

Projects

AI-Powered Mendix Chatbot with Live Search (Gemini + Serper)

- Developed a GenAI chatbot using Mendix AI Starter App, integrated with Google Gemini API for intelligent response generation.
- Enhanced chatbot capabilities with real-time web search using Serper API, enabling live, up-to-date information retrieval.
- Designed microflow-based API orchestration, dynamically routing user queries between LLM and search services based on intent.
- Implemented context-aware prompt structuring, improving response accuracy and relevance.
- Built a responsive conversational UI, ensuring seamless user interaction and real-time response handling.
- Created a hybrid LLM + live retrieval system, delivering a RAG-like intelligent chatbot experience.
